-  5. Segment performance
-  6. Thought leadership
-  7. Corporate social responsibility

Key trends in macro and business environment

Global

Global GDP growth is holding up, with the U.S. and India leading the way. The US Federal Reserve and the RBI are expected to implement rate cuts in the latter part of 2024

Global banks continue to focus on operational efficiencies, regulatory compliance and business transformation. Sustained activity in private capital

Growing impetus on captives by global institutions

While there is optimism, the ongoing economic uncertainty has prompted a cautious stance on discretionary spending by global clients

Increased volatility due to macro uncertainties leading to greater client need for benchmarking solutions to target opportunities and efficiencies

Continued advancement of emerging technologies such as Gen AI

India

India's GDP grew by a higher-than-expected 8.2% in FY'24. GDP growth to moderate to 6.8% this fiscal on account of high interest rate and lower fiscal impulse due to fiscal consolidation

Bank credit growth continued a steady path supported by the retail and services sectors. Growth in bond issuances likely to remain sluggish until the rate cuts are implemented by the RBI

Healthy corporate balance sheets, robust banking system, government's capex focus and broad-basing of private investments will be supportive of domestic activity

Medium-term growth trend expected to remain healthy, largely fueled by capital and efficiency

CRISIL Ratings 2nd edition of Annual Infrastructure Summit 2024

IN DEPTH / ECONOMY

stant (2011-12) prices in the year 2013-14 stood at Rs 99.21 lakh crore. In FY24, it is estimated at Rs 172.90 lakh crore. Which means in value terms the Indian economy added Rs 73.69 lakh crore in the last 10 years. Is that a good data point reflecting all-round growth of the economy? Perhaps not. But it does reflect growth amidst global challenges including the slowdown

RBI. "The main concern of the central bank is the persistent high food inflation and the adverse impact of that on household inflationary expectations," says Sinha. For FY25 outlook, Sinha says the expectations of normal monsoon bodes well for food inflation. But she warns that the continuation of geopolitical rifts and supply-side risks of the same on com-

Seven things digital lenders must do to manage risks

Every adversity brings with it the seed of an equivalent advantage, said Napoleon Hill in his bestselling book *Think and Grow Rich*. Covid-19 proved him right. As part of efforts to boost financial inclusion and credit penetration, India's government seized an opportunity amid the pandemic to push digital lending. With the proliferation of smartphones and Wi-Fi offering tailwind, credit growth zoomed. Such growth touched a decadal high of 15.9 per cent in FY23 at ₹148 trillion, according to our ratings division's estimates.

The push for financial inclusion and the rise of e-commerce and digital payments have created new opportunities for digital lenders, who are leveraging technology to disburse loans to a wider audience. Data analytics, machine learning and artificial intelligence are used to assess creditworthiness, reduce fraud and offer personalised products to customers. This has made credit accessible and affordable for individuals and businesses.

The government's stimulus for micro, small and medium enterprises (MSMEs) — through the credit-linked capital subsidy scheme for technology upgrade, credit guarantee scheme and purchase and preference policy — has renewed the focus on lending to small businesses. This, in turn, has helped digital lenders who have historically faced challenges in accessing credit from traditional banking channels.

Digital lenders offer loans to small businesses at competitive rates and with flexible repayment terms. They use alternative data sources, such as goods and services tax returns, Income-Tax returns and bank statements, to assess creditworthiness. Credit growth momentum is seen across segments since 2020 with agriculture growth at 8 per cent, MSMEs at 14 per cent, retail at 15 per cent and corporate at five per cent, according to estimates by the Reserve Bank of India (RBI) and our ratings division.

While digital lending has benefits, it has also raised concerns about related credit and systemic risks. To address these concerns, the RBI approved the first-loss default guarantee framework in June 2023. Assessing credit risks crucial for digital lenders as it shapes their financial health, stability and the ability to partner with banks and non-banks. To effectively manage credit risk, organisations need to implement a robust risk management system that takes into consideration factors such as the financial stability of customers, market conditions and macroeconomic trends.

Greenwich Commercial Lending Market Insight

Commercial Loan Data Sends Mixed Signals on Economic Recovery

New and conflicting data on commercial loans could add to uncertainty as financial markets await some clarity from the U.S. Federal Reserve about interest rates.

Despite favourable readings in June on consumer and producer prices, Fed Chairman Jerome Powell said that for now, policymakers are content to leave rates unchanged until they get a clearer signal on the economy. New data on loan growth from Coalition Greenwich Commercial Loan Analytics (CLA) suggests that the commercial lending market may be showing signs of positivity. In short, the data reveals that while borrowing costs continue to rise for U.S. companies (typically viewed as a negative sign for the economy), commercial loan volumes have started to grow (a positive signal).

Corporate Borrowers Face Rising Prices

As shown in the graphic below, spreads on SOFR-based commercial loans have climbed to the highest levels since the middle of 2022, on average, among corporate borrowers. The market appears to be successful in risk-based pricing given the fact that along with the increase in SOFR pricing over the last two quarters, average Probabilities of Default have also increased over that period.

Rising Spreads on Commercial Loans Continue

Note: Data represents SOFR based, CRI, secured, bilateral, originations and renewals in the indicated time period with relationship between BMM and SOFR.

Macroeconomics | First cut

Sticky food, higher IIP

April 2024

Softer core, sharp fall in fuel offset the stubbornness in food inflation

Consumer price index (CPI) inflation eased to a five-month low of 4.9% in March from 5.1% in February. While core inflation declined to a record low of 3.3%, fuel inflated 3.2% on the back of lower domestic fuel prices. The worry though, remains on persistently high food inflation, at 8.5%. Higher cereals inflation, erratic vegetable inflation and elevated pulses inflation are a cause of concern given the India Meteorological Department's (IMD) prediction of higher-than-normal temperatures between April and June.

Although headline inflation eased to 5.4% on year in fiscal 2024 from 6.7%, food inflation surged to 7.5% from an already high 6.6% in fiscal 2023. The March 2024 reading of 8.5% food inflation creates some disquiet given the prediction of higher-than-average temperatures over the next few months that can stress vegetable production and some of the rate crop that is yet to be harvested.

Beyond that, we expect food inflation to ease a tad on the back of the prediction of a favourable monsoon (abnormal rains as per the IMD), some benefit from a high food inflation base and an expected season downturn in pulses inflation.

In our base case, we expect non-food inflation to remain comfortable, supported by softness in consumer demand, a pass-through of the previous year's oil price decline to domestic fuel (petrol and liquefied petroleum gas (LPG)) prices and an expectation of temperate crude prices in the base case.

Under these assumptions, we expect CPI inflation to average 4.5% this fiscal. Intermittent/persistent of geopolitical concerns and weather shocks, if any, pose an upside risk to this call.

Meanwhile, the government's budget is slimmer, which means the fiscal impulse to growth is also weaker and, therefore, less inflationary. All these create favourable grounds for rate cuts this fiscal but the notorious food inflation or geopolitical escalations get in the way and delay the decision.

Key data points in March

- CPI inflation eased to a five-month low of 4.9% from 5.1%
- Food inflation moderated marginally from 8.7% but remained high at 8.5%
- Fuel* inflation declined to -3.2% from -0.8%
- Core CPI inflation eased to 3.3% from 3.4%

*Excludes 12% fuel and light
*CPI excluding food and beverages, and fuel and light
